Behavioural assessment summary

Analysis computed Apr 19, 2026

[Re-analyse](#)

ROLE-FIT READ

Strong fit

OVERALL CONFIDENCE

**Rich signal — strong positive
convergence**

Four behavioural items scored with strong convergence across three dimensions (conscientiousness, honesty-humility, learning); composure has limited data, but overall signals align rather than conflict.

Someone who picks up new technical and marketing concepts quickly and follows through carefully on complex work is well-positioned for a role that sits at the intersection of engineering precision and creative campaign execution, where half-finished or sloppy output creates real downstream problems.

This is a summary of observed signal against the hiring frame for this role. It is not a hire/no-hire recommendation — an interview is required to make that call.

STRENGTHS

- ✓ When a featured founder pulled out two days before publication in week three of a self-imposed weekly series, the candidate found a way to hold the "committed to publishing every Monday" schedule without missing a beat.
- ✓ In Part 5, the candidate described abandoning a "strong view" on a visual-heavy newsletter design after a committee member's evidence-based pushback, and across four forced-choice pairs, consistently favoured learning-oriented options over three alternatives.
- ✓ In Part 3, when the candidate discovered they had "misremembered" a rate and underquoted a client by 20%, they proactively contacted the client rather than quietly absorbing the loss or inflating the invoice to compensate.

INTERVIEW FOCUS

Re-analyse to generate candidate-specific interview probes.

DIMENSION ESTIMATES

Learning Orientation **Strong positive sign**

Composure **Limited signal** ▼

Interpersonal Style **Insufficient signal** ▼

Honesty & Humility

Strong positive signal

Conscientiousness

Strong positive signal

FORCED-CHOICE PROFILE

Strongest preference toward Honesty-Humility and Conscientiousness. with Learning Orientation as a secondary signal. Lower or no signal on Interpersonal Style, Composure.

► Scoring detail — for auditing ▼

MOTIVATIONAL PRIORITIES

Mission and Autonomy rank highest. Stability ranks last of four.

INTEGRITY SCENARIO (C-T2)

Option A: Share it tomorrow as planned, flag the flaw clearly in the meeting, and ask for time to fix it.

Honesty & Humility: +2

Conscientiousness: +1

Background

COVER LETTER

I am a recent graduate who has spent the last two years quietly becoming obsessed with what AI tools can do in the hands of someone who is willing to get into them properly. I have built automations using Make and Python that save me hours each week, used generative AI to produce content that genuinely works, and spent a lot of time understanding why some marketing actually moves people and most of it does not. I am not looking for a job where I manage a social media calendar. I want to build things, learn fast, and work somewhere that takes quality seriously. YFS looks like that place.

Role-specific answers

Marketing Engineer

QUESTION 1

Describe a creative project you have worked on — personal, academic, or professional — that you are genuinely proud of. What made it stand out and what did you build or create?

During my second year at university I ran the design and communications for our student

entrepreneurship society — 300 members, zero budget, and a committee that kept changing. The project I'm most proud of is a six-week content series I created called "Founders Before They Were Famous" — short-form pieces on early-stage founders who had gone through our kind of community. I wrote, designed, shot, and edited everything myself. I used Midjourney for visual treatment, Claude for drafting and sharpening copy, and CapCut for video editing. What made it stand out was that the content had real specificity — real people, real early failures, real turning points. It didn't look like generic inspiration content. Engagement on our Instagram tripled over those six weeks and we had our highest-ever event sign-ups off the back of it.

QUESTION 2

Tell us about an AI tool, automation, or script you have built or used in your own life or studies. What did it do, how did you build or set it up, and what problem did it solve?

I built a client-tracking system for my freelance design work using Make, Notion, and a bit of Python. The problem was that I was losing track of where invoices were, which clients needed following up, and what the status of each project was. I set up Make to monitor my Gmail for client emails, extract key information using a custom parser, and write it into a Notion database. I then built a Python script that ran weekly and sent me a summary of anything that had been inactive for more than two weeks. I taught myself Make by going through their documentation and building things that broke. The system handles about 15 active freelance relationships and I have not missed a follow-up or invoice since I built it — around eight months ago now.

QUESTION 3

How do you think AI is changing marketing over the next two to three years? How are you personally preparing for that shift, and what have you already experimented with?

AI is turning marketing into a craft of judgement and taste rather than a craft of production. The people who will be valuable in two or three years are not the ones who can produce content quickly — AI can do that already. They are the ones who can tell the difference between content that works and content that doesn't, and who understand enough about the underlying models to get genuinely original output rather than generic output. I have spent time reading about prompt engineering, not just at the level of 'tips and tricks' but understanding why certain structures produce better results. I have also been experimenting with AI in video — using ElevenLabs for voice, Runway for visuals — and the output quality is now good enough that I think it will reshape short-form content production significantly. I am positioning myself to be someone who can combine creative direction with technical execution, because that combination is increasingly rare.

QUESTION 4

If you had to launch a marketing campaign for YFS with a £500 budget, one week of your own time, and no team, what would you actually do? Be as specific as possible.

With £500 and one week: I would focus on LinkedIn because that is where YFS's most influential audience — educators, funders, experienced professionals who influence young people — actually lives. I would produce five long-form posts over the

week, each one telling a specific story from a YFS graduate — what they came in not knowing, what changed, and what they built or did as a result. I would use Claude to help me draft and sharpen, Canva for any visual treatments, and I would personally reach out to five alumni asking for a 15-minute conversation I could reference. On day six, I would run a targeted LinkedIn campaign with £300 of the budget targeting professionals in London and Manchester who list education or youth development in their profiles. I would measure click-through to a specific landing page and sign-ups via that page. The remaining £200 I would hold for a small follow-up boost on the best-performing post.

QUESTION 5

Describe something you have taught yourself outside of school or university in the last two years. Why did you pursue it, how did you go about it, and what did you produce or achieve as a result?

Over the last two years I have taught myself Python well enough to automate things that matter to me. It started because I was spending time manually pulling data from different platforms to understand which of my design posts were actually performing. I worked through two online courses, then immediately tried to build things that were relevant to my own work. The first real thing I built was a scraper that pulled my Instagram post data into a spreadsheet and ran basic analysis on what content types were generating the most saves and shares. It was messy and slow but it worked and I learned more from building it than from any course. I have since built three other small tools — the client tracker, a price comparison tool for freelance software, and a basic Slack bot for a student group I help run. None of them

are impressive by engineering standards but all of them are useful and I built them myself.

Standard questions

Q1

Tell us about a time you identified a problem no one else had noticed and took initiative to solve it. What did you do and what happened?

I noticed that the student society I was part of had almost no organised record of what had worked in previous years — events, campaigns, partnerships. Every new committee started from zero. I built a simple Notion wiki that captured our decisions, outcomes, and what we had learned from each initiative. I wrote it up in a way that was genuinely useful rather than bureaucratic and shared it with the incoming committee at the end of the year. It wasn't glamorous but it was a gap nobody had addressed and it took me about four weekends. The new committee chair told me at the end of their year it was the most useful resource they had.

Q2

Describe a project or goal you worked on that did not go as planned. How did you respond and what did you learn?

In my final year I pitched a research project that I was genuinely excited about — a qualitative study of how student founders talk about failure. I got approval, started recruiting participants, and then hit a wall: most people I approached were reluctant to be interviewed on record about things that had not worked. I had built my methodology around recorded interviews and hadn't built a fallback. I had to redesign the study mid-

semester to use anonymous written submissions instead, which changed the kind of data I could work with. The output was less rich than I had hoped. What I learned was that my initial enthusiasm had led me to underplan for the parts of the project that depended on other people's willingness to participate, not just my own effort. I would now pilot-test recruitment assumptions before committing to a method.

Q3

What is one skill or area of knowledge you have taught yourself in the past two years? Why did you pursue it and how did you go about it?

I taught myself video editing to a level where I could produce content I was proud of. I started with CapCut because it was accessible and then moved to DaVinci Resolve for more control. I spent about three months on it — watching YouTube tutorials, but more importantly just editing constantly and being harsh about what was not working. I applied it immediately to content for the society, which meant I could see whether my editing choices were affecting how people engaged with what I made. The main thing I learned was that editing is really about pacing and removing, not adding. The instinct to keep more is usually wrong.

Q4

Describe a situation where you disagreed with someone more senior than you. How did you handle it and what was the outcome?

In my first year I disagreed with a module coordinator about the assessment brief for a group project. The brief was ambiguous in a way I thought would lead to groups doing very different things and being marked inconsistently. I wrote up my concern clearly

and sent it to her before the project began, with specific examples of how the ambiguity could play out. She responded initially by defending the brief, but a week later she sent an updated version that clarified two of the three points I had raised. She didn't acknowledge that my email had prompted the change, which was fine. The outcome mattered more than the credit.

Q5

What is the most ambitious thing you have attempted, regardless of whether it succeeded? What drove you to try it?

The most ambitious thing I have attempted is building a small freelance design and content practice while at university. Not in a 'side hustle' way but as a genuine attempt to understand what it takes to acquire clients, deliver work that people actually value, and sustain something over time while managing everything else. At its peak I had eight regular clients and was earning enough to cover most of my living costs. I turned down two opportunities that would have paid well but would have required me to produce work I did not believe in. That felt like the hardest and most important decision I made.

Q6

Where do you want to be in five years, and how does this role connect to that path?

In five years I want to be leading the marketing and growth function of an organisation doing something I think matters — not necessarily as a title but as the person who actually owns how the organisation grows and communicates. I want to have built something I can point to: a community, a brand, a content strategy that demonstrably moved the organisation forward. This role connects to that because YFS is building

something real, and being part of that at an early stage means the growth and learning curve will be steep and genuine.

Final reflection

I want to be somewhere that takes quality seriously and where I can learn by doing real things rather than running simulations. YFS is building something that I think genuinely matters for young people who don't always get access to this kind of environment. I want to help it grow and I want to be the kind of person who can do that by combining genuine creativity with the technical confidence to execute without
